

## **Ecolab Engineering** – Innovative Measuring and Dosing Technology from Upper Bavaria

### **Shaping our future together**

**Ecolab** is one of the world's leading companies when it comes to protecting our health and using resources responsibly. Our experts develop innovative, sustainable solutions that deliver measurable results for our customers – from optimised hygiene processes and safe food production to smart water use.

Around **48,000 employees** at **170 locations** worldwide are part of the Ecolab community and support companies in the hotel, textile and food industries, catering, healthcare and many other sectors. With passion, expertise and a clear view of the challenges of our time, we are driving sustainable change together.

Ecolab Engineering is THE equipment location within the Ecolab Group and has been producing industrial membrane dosing pumps and measuring and control devices for process control 'made in Siegsdorf' for over 60 years, which are used worldwide thousands of times over!

### **New products at the trade fair - EcoEvo and EcoUno dosing pumps**

**EcoEvo** – the new dosing pumps that perfectly support your processes, making them safer and more efficient. **EcoEvo** combines compact design, intelligent pulse control and maximum process reliability.

The following options are available:

- ▶ **Internal operation** with the renowned precision of modern stepper motor drives and a widely selectable dosing capacity range – from maximum capacity down to the ml/h range.
- ▶ **Pulse mode for volume-proportional dosing** or PLC communication.
- ▶ Optimal **adaptation to different viscosities** of process chemicals.

**EcoEvo** delivers exactly what modern plants need – flexibility, control and absolute reliability.

If reliability, cost efficiency, modern stepper motor drive technology, compact dimensions and an outstanding price-performance ratio are important, the new **EcoUno** dosing pumps are a good choice.

**EcoUno** was specially developed for use in systems in which the **industrial PC** or measurement and control devices **cycle** the **dosing pumps** on demand **via the enable signal**.

*EcoEvo*

*EcoUno*

Thanks to its **compact design**, numerous **EcoUno** units can be arranged side by side even in confined spaces such as container facilities, which are becoming increasingly common worldwide.

By focusing on precisely these applications, the **EcoUno** is very easy to operate and commission, even with the high flexibility thanks to the stepper motor, and usually without the need for an operating manual.

**EcoUno** – easy to operate, durable, highly flexible and therefore ideal for the demanding requirements of dosing applications in cleaning and water treatment processes.

Customer and process orientation, team spirit and global orientation are the success factors of the mechanical engineering company from the foothills of the Alps. Helping to shape technological developments and implementing innovations in dosing technology to optimise customers' plants is a strong driving force that makes Ecolab Engineering stand out.
